Technical Data Sheet

TCP 200 Thermal Control Plate

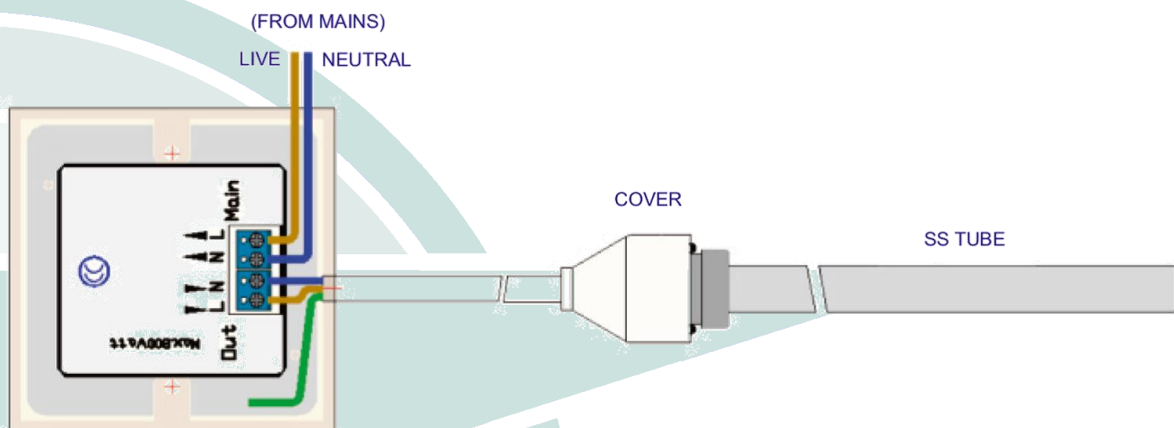

This exclusive control plate gives full control of a towel rail electric element in the bathroom.

- The power button switches the power to the element.
- The left and right output controls increase or decrease the power output in 20% stages.
- The 2 hour boost button switches the element to full power for 2 hours, then reverts to previous setting
- Can be used on dual fuel applications as well as electric only.

Wiring diagram

The control plate should be wired into a fused spur from the ring main.
